

Attached is a spreadsheet for MD, VA, OH and NY. I believe this helps show that the trend in registered vehicles for the past three years is upwards, not stagnant nor downwards.

From 2016-2019

PA decreased 59,040 vehicles. PA decreased 2 out of the 3 years.

MD increased 121,776 vehicles. MD has 41% of what PA has registered. Increased all three years.

VA increased 284,086 vehicles. VA has 67% of what PA has registered. Increased all three years.

OH increased 118,109 vehicles. OH has 9% more than PA has registered. Increased 2 out of the three years.

From 2016-2018 *(NY does not have their 2019 numbers published yet.)

NY increased 94,610 vehicles. NY has 93% of what PA has registered. Increased both years.

I compared the four surrounding states based on the number of registered vehicles by percentage and that shows we should have increased by 254,108 vehicles from 2016-2019. Our projections show that we should have increased by 346,680 based off the trend of PA registered vehicles from 2010-2016. We can argue the point of the PA trend from 2010-2016 and using the four states surrounding us that they have increased the past three years.
